

4TH ANNUAL MONTANA STATE UNIVERSITY COLLEGE OF AGRICULTURE AND EXTENSION RESEARCH REPORT

The Montana State University College of Agriculture and Extension recently released their 4th research report highlighting research conducted by MSU College of Agriculture and Extension faculty throughout Montana, who provide research-based information to agricultural agents and producers.

The mission of the research and the report is to enhance agricultural production in Montana with readily available and accessible information to help decision-making for on-farm production and management and to encourage feedback and input on future research.

The report includes 11 articles from the MSU College of Agriculture, MSU Extension, the USDA, and several other entities in the state, region, and nation. Topics include ruminant nutrition, grazing, plant pathology, soils, livestock reproduction, wildlife, and livestock genetics.

The MSU College of Agriculture and Extension research report can be accessed online at <http://coa.msueextension.org/>.
